**North Carolina Linking Study** Northwest Evaluation Association, 2014 Recently the Northwest Evaluation Association NWEA completed a study to connect the scale of the North Carolina State End of Grade EOG Testing Program used for North Carolina s mathematics and reading assessments with NWEA s Rausch Interval Unit RIT scale Information from the state assessments was used in a study to establish performance level scores on the RIT scale that would indicate a good chance of success on these tests To perform the analysis we linked together state test and NWEA test results for a sample of 18 730 North Carolina students who completed both exams in the spring of 2013 the term in which the EOG is administered For the spring season labeled current season an Equipercentile method was used to estimate the RIT score equivalent to each state performance level For fall labeled prior season we determined the percentage of the population within the selected study group that performed at each level on the state test and found the equivalent percentile ranges within the NWEA dataset to estimate the cut scores For example if 40% of the study group population in grade 3 mathematics performed below the proficient level on the state test we would find the RIT score that would be equivalent to the 40th percentile for the study population this would not be the same as the 40th percentile in the NWEA norms This RIT score would be the estimated point

on the NWEA RIT scale that would be equivalent to the minimum score for proficiency on the state test Documentation about this method can be found on our website Table Sets 1 and 2 show the best estimate of the minimum RIT equivalent to each state performance level for same season spring and prior season fall RIT scores These tables can be used to identify students who may need additional help to perform well on these tests Table Sets 3 and 4 show the estimated probability of a student receiving a proficient score on the state assessment based on that student s RIT score These tables can be used to assist in identifying students who are not likely to pass these assessments thereby increasing the probability that intervention strategies will be planned and implemented These tables can also be useful for identifying target RIT score objectives likely to correspond to successful or proficient performance on the state test Table 5 shows the correlation coefficients between Measured Academic Performance MAP and the state test in each grade These statistics show the degree to which MAP and the state test are linearly related with values at or near 1 0 suggesting a perfect linear relationship and values near 0 0 indicating no linear relationship Table 6 shows the percentages of students at each grade and within each subject whose status on the state test i e whether or not the student met standards was accurately predicted by their MAP performance and using the estimated cut scores within the current study This table can be used to understand the predictive validity of MAP with respect to the EOG

level Documentation about this method can be found on NWEA s website *Common Core State Standards of Mathematics and Student Achievement* Eugene Anthony Benner,2015 The purpose of this action research study was to determine if students in my 8th Grade Mathematics and 9th Grade Algebra I classes would have a noticeable increase in their individual mathematics achievement scores on the NWEA MAP tests after being taught material aligned to the new North Dakota Mathematics Content Standards based on Common Core State Standards I also wanted to know how students felt about the different teaching styles used in the classroom when they had to do activities and assignments aligned to the new standards Each student kept a journal to keep track of their thoughts and feelings on how things were going in the classroom Students were exposed to new activities and teaching strategies to help them better understand the material being taught The activities and teaching strategies also helped students make connections between the real world and the classroom content being taught These new activities or rich tasks were to help students better understand the material being taught The students total change in mathematics achievement was measured as well as their percentage of change and the class average change of mathematics achievement scores The NWEA data was collected from the Fall 2012 Spring 2013 Fall 2013 and Spring 2014 NWEA MAP tests as these tests were aligned to the Common Core There were some improvements in student growth but there were some apprehensiveness from the students towards the different teaching and testing strategies
