1. The basic laws of heredity were formed by an Austrian monk named *Gregor Mendel*.  
Because his work laid the foundation to the study of heredity, Mendel is referred to as the *Father of Genetics*.
2. Mendel based his laws on the study of pea plants because they *reproduce rapidly* and they have many *visible traits*.
3. Examples of traits that Mendel observed were *pod shape, pod color, seed color, seed shape and plant height*.
4. Mendel termed plants that produce offspring with traits exactly like parent plants to be *purebred*.
5. In Mendel's first experiment, Mendel crossed purebred short with purebred tall plants. These plants were termed the *parental* generation, or *P* generation.
6. The offspring produced by a cross of a purebred tall and short plant were all *tall*.
7. The generation of offspring produced by this first cross were called the *first filial* generation, or the *F1* generation. The word "filial" means *son*.
8. In Mendel's second experiment, he crossed two *F1* plants produced from his first experiment.
9. This second generation of plants are called the *second filial* generation, or the *F2* generation.
10. To his surprise, Mendel observed that the offspring of these two tall plants were both *tall and short*.
