

Lesson 9: Quadratic inequalities

6 Steps on Solving Quadratic Inequalities

1. Change the inequality to quadratic equation (standard form).
2. Solve the quadratic equation. Find the value of x .
3. Plot the boundary points on number line.
4. Pick a value of x within each identified interval and then test.
5. Identify the interval that satisfies the inequality.
6. Draw the graph down.

$x^2 - 7x + 12 > 0$
 factoring first then
 $(x - 4)(x - 3) > 0$
 $x = 4 ; x = 3$

$(-\infty, 3) \quad (3, 4) \quad (4, +\infty)$
 substitute it on the value of x

for $(-\infty, 3)$, if $x = 0$ then,
 $x^2 - 7x + 12 > 0$
 $0^2 - 7(0) + 12 > 0$
 $12 > 0$ RIGHT

for $(3, 4)$, if $x = 3.5$ then,
 $x^2 - 7x + 12 > 0$
 $3.5^2 - 7(3.5) + 12 > 0$
 $12.25 - 24.5 + 12 > 0$
 $-0.25 > 0$ WRONG

Lesson 10: Graphical solution

- Graphical solution** is used to solve the inequality. It is done by plotting the inequality on a Cartesian coordinate system. The solution set is the region where the inequality is satisfied.

Lesson 11: Word problems

1. Read the problem carefully and identify the given information.
2. Draw a diagram or graph to illustrate the problem.
3. Write down the inequality that represents the problem.
4. Solve the inequality.
5. Check the solution against the original problem.

- Word problems** are problems that require the use of algebra to solve. They often involve real-world situations and require the student to identify the given information and the unknowns.
- Example:
 $y = 3x$

- Graphical solution of a system of linear inequalities** is a method of solving a system of linear inequalities by graphing the inequalities on a Cartesian coordinate system. The solution set is the region where all the inequalities are satisfied.

- Graphical solution of a system of linear inequalities** is a method of solving a system of linear inequalities by graphing the inequalities on a Cartesian coordinate system. The solution set is the region where all the inequalities are satisfied.

HOW TO SOLVE A PROBLEM?

- Y is directly proportional to X , such that $Y=18$ when $X=3$.

- a. Find the equation relating Y to X .

$$k = \frac{Y}{X}$$

- b. Find Y if $X=5$.

$$Y = kX$$

$$Y = 6(5)$$

$$Y = 30$$

- c. Find X if $Y=24$.

$$X = \frac{Y}{k} \quad X = \frac{24}{6} \quad X = 4$$

Lesson 12: Indirect Variation

- Indirect Variation** is a relationship between two variables where one variable is inversely proportional to the other. It is represented by the equation $Y = \frac{k}{X}$.

Example:
 $x \times y = 12$

- Graphical solution of indirect variation** is a method of solving a system of linear inequalities by graphing the inequalities on a Cartesian coordinate system. The solution set is the region where all the inequalities are satisfied.

- Graphical solution of indirect variation** is a method of solving a system of linear inequalities by graphing the inequalities on a Cartesian coordinate system. The solution set is the region where all the inequalities are satisfied.

- Graphical solution of indirect variation** is a method of solving a system of linear inequalities by graphing the inequalities on a Cartesian coordinate system. The solution set is the region where all the inequalities are satisfied.

Example:
 $x = \frac{12}{y}$

Lesson 13: Word problems

- Word problems** are problems that require the use of algebra to solve. They often involve real-world situations and require the student to identify the given information and the unknowns.

Teaching Students With High-Incidence Disabilities Mary Anne Prater, 2016-12-29 To ensure that all students receive quality instruction *Teaching Students with High Incidence Disabilities* prepares preservice teachers to teach students with learning disabilities emotional behavioral disorders intellectual disabilities attention deficit hyperactivity and high functioning autism It also serves as a reference for those who have already received formal preparation in how to teach special needs students Focusing on research based instructional strategies Mary Anne Prater gives explicit instructions and includes models throughout in the form of scripted lesson plans The book also has a broad emphasis on diversity with a section in each chapter devoted to exploring how instructional strategies can be modified to accommodate diverse exceptional students Real world classrooms are brought into focus using teacher tips embedded case studies and technology spotlights to enhance student learning

Cultivating Knowledge Scott Tunison, 2016-07-27 Over the last decade or two there has been increasing consensus that academic research if used judiciously to guide practice improves both educational policy and pedagogy ultimately leading to better outcomes for students Yet despite this potential there remains a deep ravine between the body of knowledge built through research especially at the intersection between specific interventions and improved student achievement and the actions taken by policy makers administrators and classroom teachers in their regular practice There are myriad reasons for this research practice divide Among them is that it is difficult for district based people to access primary research Furthermore multiple waves of well intentioned research based but largely unsuccessful school reform efforts have resulted in skepticism among practitioners about research and at the same time damaged researchers credibility in the field This book is divided into three broad areas First it develops an engaging analysis of the root causes for the research practice gap in education Second it describes the framework developed and used in a public school district by the author to address the root causes and provides evidence of its efficacy to facilitate greater incorporation of research into school and district level practice Through a process the author calls Knowledge Cultivation the framework uses weekly research summaries for district leaders that are relevant to their real time issues along with suggestions about ways in which the research might be useful The final section of the book includes the actual research summaries used by the author over a five year period

The Influence of Theorists and Pioneers on Early Childhood Education Roy Evans, Olivia N. Saracho, 2022-02-23 The chapters in this book reflect on the major shifts in the views of early childhood thinkers and educators who have contributed to contemporary theoretical frameworks pertaining to early childhood learning The book also revisits and critically analyses the influence of developmental theories on early childhood education starting in the 1890s with the work of G Stanley Hall that established the close association of early childhood education and child development Several chapters comprise critical examinations of the fundamental influence of thinkers such as Piaget Vygotsky Kohlberg Adler Pestalozzi Froebel and so on on early childhood learning The book also contends that these theoretical conceptions of

child development have heavily influenced modern views of early childhood education This book is a significant new contribution to early childhood learning and will be a great resource for academics researchers and advanced students of Education Public Policy History of Education Psychology and Sociology The chapters in this book were originally published as a special issue of the Early Child Development and Care

Linguistic Influences on Mathematical Cognition Ann

Dowker,Hans-Christoph Nuerk,2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing
