

How to Secure a Network with Linux

Securing a network with Linux involves knowing techniques for how to:

- Secure network services.
- Prevent information leakage.
- Test for open ports and perform port scans
- Manage Xinetd security.
- Secure SSH
- Configure local Linux firewalls.

Securing Network Services

What are Network Services

- Network services are sometimes called daemons (a program that runs continuously and exists for the purpose of handling periodic service requests).
 - Listen on network ports for incoming connections
 - Often the focal point of system attacks.
- Constantly running in the background.
- Output recorded in log files.
 - Not connected to a terminal
 - Some use var system log files
 - Some use their own log files
 - Check the config files
- Designed to perform a single task.

How to Secure Network Services

- Use a dedicated user for each service.
 - Take advantage of privilege separation. If an account gets exploited, it can only impact a single service.
 - Do not run services as root
- Ports below 1024 are privileged.
 - Require superuser privileges to open.
 - Use root to open them, then drop privileges.
 - Configuration controlled by each service.

Kovacich,2013-04-17 When you first hear the term Information Assurance you tend to conjure up an image of a balanced set of reasonable measures that have been taken to protect the information after an assessment has been made of risks that are posed to it In truth this is the Holy Grail that all organisations that value their information should strive to achieve but which few even understand Information Assurance is a term that has recently come into common use When talking with old timers in IT or at least those that are over 35 years old you will hear them talking about information security a term that has

survived since the birth of the computer In the more recent past the term Information Warfare was coined to describe the measures that need to be taken to defend and attack information This term however has military connotations after all warfare is normally their domain Shortly after the term came into regular use it was applied to a variety of situations encapsulated by Winn Schwartau as the three classes of Information Warfare Class 1 Personal Information Warfare Class 2 Corporate Information Warfare Class 3 Global Information Warfare Political sensitivities lead to warfare being replaced by operations a much more politically correct word Unfortunately operations also has an offensive connotation and is still the terminology of the military and governments
