

Chapter 5 Find The Errors!

For use with Lessons 5-1 through 5-2

For each exercise, identify the error(s) in planning the solution or solving the problem. Then write the correct solution.

1. The table shows the price for different amounts of cashew nuts. What is the rate of change in price with respect to weight? What does that rate of change represent?

Weight (lbs.)	Price (\$)
1	3.5
2	7
3	10.5
4	14

$$\text{rate of change} = \frac{\text{change in price}}{\text{change in weight}}$$

$$\frac{2 - 1}{7 - 3.5} \approx 0.286 \quad \frac{2 - 2}{10.5 - 7} \approx 0.286 \quad \frac{4 - 3}{14 - 10.5} \approx 0.286$$

The rate of change is approximately \$0.286 per pound.

It represents the unit price of the cashews.

2. What is the slope of the line through $(9, -3)$ and $(7, -4)$?

$$\begin{aligned} \text{slope} &= \frac{y_2 - y_1}{x_2 - x_1} \\ &= \frac{-4 - (-3)}{9 - 7} \\ &= -\frac{1}{2} \end{aligned}$$

The slope of the line is $-\frac{1}{2}$.

3. Does the equation $-x + y = 3$ represent a direct variation? If so, find the constant of variation.

$$\begin{aligned} -x + y &= 3 \\ y &= x + 3 \end{aligned}$$

The equation is a direct variation because y is always 3 more than x .

4. A rectangular photo is 3 inches high and 5 inches long. As the photo is enlarged, the height varies directly with the width. What is an equation that relates the length (in inches) x and the height (in inches) y ?

$$\begin{aligned} y &= kx \\ 5 &= 3k \\ \frac{5}{3} &= k \end{aligned}$$

The equation $y = \frac{5}{3}x$ gives the height y (in inches) of an enlargement that is x inches wide.

Fundamentals of Classical and Modern Error-Correcting Codes Shu Lin, Juane Li, 2021-12-09 An accessible textbook that uses step by step explanations relatively easy mathematics and numerous examples to aid student understanding **Error Correction Coding** Todd K. Moon, 2020-12-15 Providing in depth treatment of error correction Error Correction Coding Mathematical Methods and Algorithms 2nd Edition provides a comprehensive introduction to classical and modern methods of error correction The presentation provides a clear practical introduction to using a lab oriented approach Readers are encouraged to implement the encoding and decoding algorithms with explicit algorithm statements and the mathematics used in error correction balanced with an algorithmic development on how to actually do the encoding and decoding Both block and stream convolutional codes are discussed and the mathematics required to understand them are introduced on a just in time basis as the reader progresses through the book The second edition increases the impact and reach of the book updating it to discuss recent important technological advances New material includes Extensive coverage of LDPC codes including a variety of decoding algorithms A comprehensive introduction to polar codes including systematic encoding decoding and list decoding An introduction to fountain codes Modern applications to systems such as HDTV DVBT2 and cell phones Error Correction Coding includes extensive program files for example C code for all LDPC decoders and polar code decoders laboratory materials for students to implement algorithms and an updated solutions manual all of which are perfect to help the reader understand and retain the content The book covers classical BCH Reed Solomon Golay Reed Muller Hamming and convolutional codes which are still component codes in virtually every modern communication system There are also fulsome discussions of recently developed polar codes and fountain codes that serve to educate the reader on the newest developments in error correction Error-Control Coding for Data Networks Irving S. Reed, Xuemin Chen, 2012-12-06 The purpose of Error Control Coding for Data Networks is to provide an accessible and comprehensive overview of the fundamental techniques and practical applications of the error control coding needed by students and engineers An additional purpose of the book is to acquaint the reader with the analytical techniques used to design an error control coding system for many new applications in data networks Error control coding is a field in which elegant theory was motivated by practical problems so that it often leads to important useful advances Claude Shannon in 1948 proved the existence of error control codes that under suitable conditions and at rates less than channel capacity would transmit error free information for all practical applications The first practical binary codes were introduced by Richard Hamming and Marcel Golay from which the drama and excitement have infused researchers and engineers in digital communication and error control coding for more than fifty years Nowadays error control codes are being used in almost all modem digital electronic systems and data networks Not only is coding equipment being implemented to increase the energy and bandwidth efficiency of communication systems but coding also provides innovative solutions to many related data
