Genesys Java Developers Guide:

Construction and Evolution of Code Generators Sven Jörges, 2013-01-12 Automatic code generation is an essential cornerstone of model driven approaches to software development. Currently lots of techniques are available that support the specification and implementation of code generators such as engines based on templates or rule based transformations. All those techniques have in common that code generators are either directly programmed or described by means of textual specifications. This monograph presents Genesys a general approach which advocates the graphical development of code generators for arbitrary source and target languages on the basis of models and services. In particular it is designed to support incremental language development on arbitrary metalevels. The use of models allows building code generators in a truly platform independent and domain specific way. Furthermore models are amenable to formal verification methods such as model checking which increase the reliability and robustness of the code generators. Services enable the reuse and integration of existing code generation frameworks and tools regardless of their complexity and at the same time manifest as easy to use building blocks which facilitate agile development through quick interchangeability. Both models and services are reusable and thus form a growing repository for the fast creation and evolution of code generators. *Leveraging Applications of Formal Methods, Verification and Validation. Technologies for Mastering Change* Tiziana Margaria, Bernhard Steffen, 2014-09-26 The two volume set LNCS 8802 and LNCS 8803 constitutes the refereed proceedings of the 6th International Symposium on Leveraging Applications of Formal Methods Verification and Validation ISoLA 2014 held in Imperial Corfu Greece in October 2014. The total of 67 full papers was carefully reviewed and selected for inclusion in the proceedings. Featuring a track introduction to each section the papers are organized in topical sections named: evolving critical systems, rigorous engineering of autonomic ensembles, automata learning, formal methods and analysis in software product line engineering, model based code generators and compilers, engineering virtualized systems, statistical model checking, risk based testing, medical cyber physical systems, scientific workflows, evaluation and reproducibility of program analysis processes and data integration in the networked healthcare, semantic heterogeneity in the formal development of complex systems. In addition part I contains a tutorial on automata learning in practice as well as the preliminary manifesto to the LNCS Transactions on the Foundations for Mastering Change with several position papers. Part II contains information on the industrial track and the doctoral symposium and poster session. *Informationweek*, 1996 *Information Technology* Ricardo Reis, 2006-04-11 This book contains a selection of tutorials on hot topics in information technology which were presented at the IFIP World Computer Congress WCC2004. WCC2004 took place at the Centre de Congr s Pierre Baudis in Toulouse France from 22 to 27 August 2004. The 11 chapters included in the book were chosen from tutorials proposals submitted to WCC2004. These papers report on several important and state of the art topics on information technology such as Quality of Service in Information Networks, Risk Driven Development of Security Critical Systems Using UMLsec.
