**Petroleum Refinery Process Modeling** Y. A. Liu, Ai-Fu Chang, Kiran Pashikanti, 2018-06-05 A comprehensive review of the theory and practice of the simulation and optimization of the petroleum refining processes Petroleum Refinery Process Modeling offers a thorough review of how to quantitatively model key refinery reaction and fractionation processes The text introduces the basics of dealing with the thermodynamics and physical property predictions of hydrocarbon components in the context of process modeling The authors three experts on the topic outline the procedures and include the key data required for building reaction and fractionation models with commercial software The text shows how to filter through the extensive data available at the refinery and using plant data to begin calibrating available models and extend the models to include key fractionation sub models It provides a sound and informed basis to understand and exploit plant phenomena to improve yield consistency and performance In addition the authors offer information on applying models in an overall refinery context through refinery planning based on linear programming This important resource Offers the basic information of thermodynamics and physical property predictions of hydrocarbon components in the context of process modeling Uses the key concepts of fractionation lumps and physical properties to develop detailed models and workflows for atmospheric CDU and vacuum VDU distillation units Discusses modeling FCC catalytic reforming and hydroprocessing units Written for chemical engineers process engineers and engineers for measurement and control this resource explores the advanced simulation tools and techniques that are available to support experienced and aid new operators and engineers

**PEM Fuel Cells with Bio-Ethanol Processor Systems** Marta S. Basualdo, Diego Feroldi, Rachid Outbib, 2011-10-30 An apparently appropriate control scheme for PEM fuel cells may actually lead to an inoperable plant when it is connected to other unit operations in a process with recycle streams and energy integration PEM Fuel Cells with Bio Ethanol Processor Systems presents a control system design that provides basic regulation of the hydrogen production process with PEM fuel cells It then goes on to construct a fault diagnosis system to improve plant safety above this control structure PEM Fuel Cells with Bio Ethanol Processor Systems is divided into two parts the first covers fuel cells and the second discusses plants for hydrogen production from bio ethanol to feed PEM fuel cells Both parts give detailed analyses of modeling simulation advanced control and fault diagnosis They give an extensive in depth discussion of the problems that can occur in fuel cell systems and propose a way to control these systems through advanced control algorithms A significant part of the book is also given over to computer aided engineering software tools that can be used to evaluate the dynamic performance of the overall plant PEM Fuel Cells with Bio Ethanol Processor Systems is intended for use by researchers and advanced students on chemical electrical electronic and mechanical engineering courses in which dynamics and control are incorporated with the traditional steady state coverage of flowsheet synthesis engineering economics and optimization Collaborative and Distributed Chemical Engineering.
