**Component Deployment** Wolfgang Emmerich, Alexander L. Wolf, 2004-05-03 This volume of the Lecture Notes in Computer Science series contains the proceedings of the second Working Conference on Component Deployment which took place May 20-21 2004 at the e Science Institute in Edinburgh Scotland as a collocated event of the International Conference on Software Engineering Component deployment addresses what needs to be done after a component has been developed Component deployment includes activities such as component customization configuration integration activation deactivation and commissioning The emerging research community that investigates component deployment concerns itself with the principles methods and tools for deployment activities The community held its first working conference in Berlin Germany in June 2002 The proceedings were published by Springer Verlag as volume 2370 of the Lecture Notes in Computer Science series The program of this year's conference consisted of an invited talk and 16 technical paper presentations The invited talk was given by Patrick Goldsack of Hewlett Packard Research Laboratories Bristol UK He presented the Smart Frog component deployment framework that HP released as Open Source The technical papers were carefully selected from a total of 34 submitted papers Each paper was thoroughly peer reviewed by at least three members of the program committee and consensus on acceptance was achieved by means of an electronic PC meeting

**Evaluation and Comparison of CORBA (Object Request Broker) Implementations** Roland Gelbmann, 2002-07-11 Inhaltsangabe Abstract Common Object Request Broker Architecture CORBA a standard from the Object Management Group OMG defines a vendor independent architecture and infrastructure for distributed systems Further CORBA specifies a client server platform as well as an object oriented programming model for distributed computing The Object Request Broker ORB implements the part of CORBA which manages communication and data exchange between objects CORBA based applications often have to communicate with ORBs from different vendors Therefore testing the interoperability is one important point in this work Six actually available ORB implementations are shown and compared at given features If a problem has to be solved with CORBA it is necessary to choose the best ORB implementation for that purpose because they differ often at significant points Important details for decision are Standard Conformity Robustness Functionality as well as Functional Range or Interoperability Exactly these properties are to be examined in this work The investigation is performed on six at the web available ORBs indeed Jacorb 1.4 beta 2 Orbacus 4.1.0 Orbix E2A 2.0 OpenORB 1.2.0 J2SE ORB 1.4.0 as well as TAO 1.2.1 all in their most actual released version Additionally to these properties the correct implementation of the most important CORBA Services is checked They are Event Service Notification Service Name Service and Transaction Service The ORBs are compared at this given properties It shows that the ORBs differ very much from each other and that the CORBA Services are often implemented incorrectly Further a high costly implementation is no guarantee for best quality at all points The evaluation shows that a freely available ORB can be as good as or better than a commercial one
