Plotted on the X-axis, this dimension measures the ability of a firm to compete in the market. Market share, brand position, and customer loyalty are some factors affecting this dimension.

Once the B.U.'s strengths against market attractiveness has been plotted on the GE-McKinsey Matrix, executives can finalize an appropriate investment strategy from one of the following:

Business units that sit in the "Harvest" section of the GE-McKinsey grid should be divested, or invested in only if they earn more money than what was invested in them.
