

Programming Lab 2: A Mail User Agent in Java

In this lab you will implement a mail user agent that sends mail to other users. Your task is to program the SMTP interaction between the MUA and the local SMTP server. The client provides a graphical user interface containing fields for entering the sender and recipient addresses, the subject of the message and the message itself. Here's what the user interface looks like:

With this interface, when you want to send a mail, you must fill in complete addresses for both the sender and the recipient, i.e., `user@acmeschool.edu`, not just simply `user`. You can send mail to only one recipient. You will also need to give the name (or IP address) of your local mailserver. If you do not know the name of your local mailserver, see [Querying the DNS](#) below for more information on how to obtain the address of the local mailserver.

When you have finished composing your mail, press `Send` to send it.

The Code

The program consists of four classes:

MailClient	The user interface
Message	Mail message
Envelope	SMTP envelope around the Message
SMTPConnection	Connection to the SMTP server

You will need to complete the code in the `SMTPConnection` class so that in the end you will have a program that is capable of sending mail to any recipient. The code for the `SMTPConnection` class is at the [end of this page](#). The code for the other three classes is provided [on this page](#).

The places where you need to complete the code have been marked with the comments `/* Fill in */`. Each of the places requires one or more lines of code.

Mail User Agent In Java

AREHART,Charlie Arehart

Mail User Agent In Java:

Getting the books **Mail User Agent In Java** now is not type of inspiring means. You could not forlorn going subsequent to ebook accretion or library or borrowing from your associates to gain access to them.
