**Linear Functional Equations. Operator Approach** Anatolij Antonevich, 2012-12-06 In this book we shall study linear functional equations of the form  $m \sum_{k=1}^n U_k(x) f_k(x) = 1$  where  $U$  is an unknown function from a given space  $F(X)$  of functions on a set  $X$ ,  $U_k: X \rightarrow \mathbb{R}$  are given mappings and  $f_k$  are given functions. Our approach is based on the investigation of the operators given by the left hand side of equation 1. In what follows such operators will be called functional operators. We will pay special attention to the spectral properties of functional operators: first of all to invertibility and the Noether property. Since the set  $X$ , the space  $F(X)$ , the mappings  $U_k$  and the coefficients  $a_k$  are arbitrary, the class of operators of the form 1 is very rich and some of its individual representatives are related with problems arising in various areas of mathematics and its applications. In addition to the classical theory of functional equations among such areas one can indicate the theory of functional differential equations with deviating argument, the theory of nonlocal problems for partial differential equations, the theory of boundary value problems for the equation of a vibrating string and equations of mixed type, a number of problems of the general theory of operator algebras and the theory of dynamical systems, the spectral theory of automorphisms of Banach algebras and other problems.

**Boundary-value Problems with Free Boundaries for Elliptic Systems of Equations** Valentin Nikolaevich Monakhov, Lev Ākovlevich Leĭfman, 1983 This book is concerned with certain classes of nonlinear problems for elliptic systems of partial differential equations: boundary value problems with free boundaries. The first part has to do with the general theory of boundary value problems for analytic functions and its applications to hydrodynamics. The second presents the theory of quasiconformal mappings along with the theory of boundary value problems for elliptic systems of equations and applications of it to problems in the mechanics of continuous media with free boundaries, problems in subsonic gas dynamics, filtration theory and problems in elastico-plasticity.

*Thermodynamic Properties of Aqueous Solutions of Organic Substances* V. P. Belousov, Mikhail IĭUĭr'evich Panov, 1994 Thermodynamic Properties of Aqueous Solutions of Organic Substances discusses the structure of aqueous solutions of organic substances and the intermolecular reactions in them, presenting experimental data, modern concepts concerning the properties of these solutions and the results of computer simulation. The book offers an in-depth study of the properties of maximally dilute aqueous solutions of polar and nonpolar organic molecules as well as the specific enthalpies of mixing. The Addendum contains experimental data on the thermodynamic properties of infinitely dilute solutions.
