Vocabulary: allele, codominance, dominant, genotype, heterozygous, homozygous, phenotype, probability, Punnett square, recessive, trait

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

- The image shows a flower that was produced by crossing a pure red flower with a pure white flower. Which do you think is the dominant petal color: red or white? Explain.

The dominant petal colour is red because in the photo there are more red petals than there are white petals.

- How is the inheritance pattern shown by this flower different from other inheritance patterns you have seen or studied? It's different because it has both colours on it. Even though the red is dominant, the recessive allele is also present. On a normal pattern, the dominant would cover all of the plant.

Gizmo Warm-up

There are many different ways traits can be inherited. Some traits are governed by **alleles** that are **dominant** over other alleles. Other traits are governed by alleles that share dominance. These alleles follow a pattern of inheritance called **codominance**. With the *Chicken Genetics* Gizmo, you will study how codominance affects the inheritance of certain traits.

"Pure" chickens

- Turn on **Show genotype**. The **genotype** is the allele combination an organism has. Point to the red chicken.

A. What is the red chicken's genotype? F^RF^R

B. What is the white chicken's genotype? F^WF^W

- What do you think the letters *F*, *R*, and *W* stand for in the genotypes?

The F probably stands for feather, the R stands for red and W stands for white.
