Key Objectives

- Graph and recognize inverses of relations and functions.
- Find inverses of functions.

Key Terms

- An **inverse relation** is the set of all ordered pairs (y, x) from a relation with ordered pairs (x, y) . The graph of an inverse relation is the reflection of the graph of the relation across the line $y = x$.
- **Inverse functions** are functions that undo each other and are found by using inverse operations. The input and output values of inverse functions are exchanged.

Example 1

Graphing Inverse Relations

To graph an inverse relation, reflect each point across the line $y = x$. This is equivalent to switching the x - and y -values in each ordered pair of the relation.
