Overview and Purpose

The Center for Children and Technology, in their *Adventures in Supercomputing 1993-1994 Evaluation*, found that "the size of the group a student worked in, and the sex of the students in that group, are important factors in the type of project work a student is able to accomplish in AiS." Furthermore, "groups of two or three students, and particularly all-female or mixed-sex groups, were most likely to achieve the integration of content understanding and mastery of computational strategies...."
