**4-5 Scatter Plots and Trend Lines (continued)**

By drawing a trend line over a graph of data, you can make predictions.

The scatter plot shows a relationship between a man's height and the length of his femur (thigh bone). Based on this relationship, predict the length of a man's femur if his height is 160 cm.

**Step 1:** Draw a trend line through the points.

**Step 2:** Go from 160 cm on the  $x$ -axis up to the line.

**Step 3:** Go from the line left to the  $y$ -axis.

The point (160, 41) is on the line.

A man that is 160 cm tall would have a femur about 41 cm long.

To find an  $x$ -value, go right from the  $y$ -value, and then down to the  $x$ -value. So, a man with a 42 cm femur would be about 162 cm tall.

The scatter plot shows a relationship between engine size and city fuel economy for ten automobiles.

5. Draw a trend line on the graph.
6. Based on the relationship, predict...
  - a. the city fuel economy of an automobile with an engine size of 5 L.  
\_\_\_\_\_
  - b. the city fuel economy of an automobile with an engine size of 2.8 L.  
\_\_\_\_\_
  - c. the engine size of an automobile with a city fuel economy of 11 mi/gal.  
\_\_\_\_\_
  - d. the engine size of an automobile with a city fuel economy of 28 mi/gal.  
\_\_\_\_\_
