

HEMOSTASIS

I. Injury

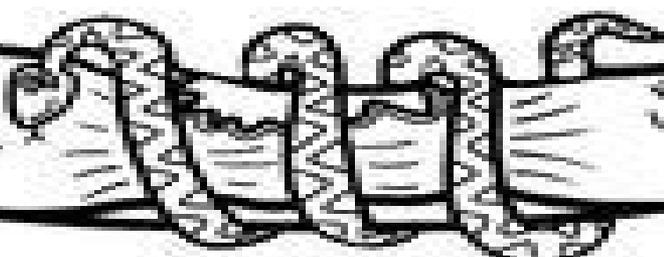

When the endothelial lining of a blood vessel is damaged, the blood will leak out. This is the first step in hemostasis.

Hemostasis - "stop" means - "stop"

II. Vasoconstriction

As soon as the injury occurs, the smooth muscle layer of the vessel contracts to narrow the vessel in order to decrease the amount of blood loss.

Vasoconstriction - "tightening" lasts for up to 30 minutes.

III. Platelet Plug

Platelets are small, disc-shaped cells that stick to the injured vessel wall and form a temporary plug to stop the bleeding.

The platelet plug prevents further bleeding from the injured blood vessel.

IV. Coagulation

Coagulation is the process of forming a blood clot. It involves the conversion of fibrinogen to fibrin, which then traps red blood cells and platelets to form a solid mass.

Now a solid mass - the injured blood vessel is closed and the clot dissolves.

Hemostasis Coloring Workbook
