**Seasteading** Joe Quirk, 2017-03-21 In these thought provoking visions of the future The Wall Street Journal Joe Quirk and Patri Friedman of the Seasteading Institute explain how ocean cities can solve many of our environmental technological and civic problems and introduce the visionaries and pioneers who are now making seasteading a reality Our planet has been suffering from serious environmental problems and their social and political consequences But imagine a vast new source of sustainable and renewable energy that would also bring more equitable economies A previously untapped source of farming that could produce significant new sources of nutrition Future societies where people could choose the communities they want to live in free from the restrictions of conventional citizenship This extraordinary vision of our near future as imagined in Seasteading attracted the powerful support of Silicon Valley s Peter Thiel and it may be drawing close to reality Facing growing environmental threats French Polynesia has already signed on to build some of the world s first seasteads Joe Quirk and Patri Friedman show us how cities built on floating platforms in the ocean will work and they profile some of the visionaries who are implementing basic concepts of seasteading today An entrepreneur s dream these floating cities will become laboratories for innovation and creativity Seasteading offers hope for a future when life on land has grown grim Kirkus Reviews proving the adage that yesterday s science fiction is tomorrow s science fact Chinese Naval Shipbuilding Andrew S. Erickson, 2017-02-15 China s shipbuilding industry has grown more rapidly than any other in modern history Commercial shipbuilding output jumped thirteen fold from 2002 12 ensuring that Beijing has largely reached its goal of becoming the world s leading shipbuilder Yet progress is uneven with military shipbuilding leading overall but with significant weakness in propulsion and electronics for military and civilian applications It has never been more important to assess what ships China can supply its navy and other maritime forces with today and in the future Chinese Naval Shipbuilding answers three pressing questions What are China s prospects for success in key areas of naval shipbuilding What are the likely results for China s navy What are the implications for the U S Navy To address these critical issues this volume assembles some of the world s leading experts and linguistic analysts often pairing them in research teams These sailors scholars industry professionals and government specialists have commanded ships at sea led shipbuilding programs ashore toured Chinese vessels and production facilities invested in Chinese shipyards and analyzed and presented important data to top level decision makers in times of crisis In synthesizing their collective insights this book fills a key gap in our understanding of China its shipbuilding industry its navy and what it all means **Mine engineering geological disaster forecasting, monitoring, and prevention** Jie Chen, Wei Liu, Qingsheng Bai, Xuanmei Fan, 2023-01-03 **Regulating Genetically Modified Crops in View of Environmental Risks** Ancui Liu, 2022-05-25 This book analyzes international and Chinese regulatory approaches addressing environmental risks that may be caused by GM crops and examines how China implements its international obligations in its policies and laws Using the legal doctrinal method the book discusses the

precautionary principle and the public involvement principle as well as several legal measures at the international law level and in Chinese law It observes that legal principles and measures as provided for in China s GMO legal framework have generally implemented the international obligations regarding the prevention of environmental risks that may be caused by the cultivation of GM crops and related activities However the book argues that Chinese law lacks an explicit codification of the precautionary principle and the same is true with regard to public participation the regulatory framework lacks specific obligations It concludes that future research should focus on the application and enforcement of the relevant Chinese legislation and that it is also important to investigate how the environmental risks that may be caused by new techniques such as genome editing techniques could be prevented given the experience gained by regulating the cultivation of GM crops and related activities

**Innovate to Dominate** Tai Ming Cheung,2022-08-15 In Innovate to Dominate Tai Ming Cheung offers insight into why how and whether China will overtake the United States to become the world s preeminent technological and security power This examination of the means and

ends of China's quest for techno security supremacy is required reading for anyone looking for clues as to the long term direction of the global order. The techno security domain Cheung argues is where national security innovation and economic development converge and it has become the center of power and prosperity in the twenty first century. China's paramount leader Xi Jinping recognizes that effectively harnessing the complex interactions among security innovation and development is essential in enabling China to compete for global dominance. Cheung offers a richly detailed account of how China is building a potent techno security state. In *Innovate to Dominate* he takes readers from the strategic vision guiding this transformation to the nuts and bolts of policy implementation. The state led top down mobilizational model that China is pursuing has been a winning formula so far but the sternest test is ahead as China begins to compete head to head with the United States and aims to surpass its archrival by mid century if not sooner. *Innovate to Dominate* is a timely and analytically rigorous examination of the key strategies guiding China's transformation of its capabilities in the national technological military and security spheres and how this is taking place. Cheung authoritatively addresses the burning questions being asked in capitals around the world: Can China become the dominant global techno security power? And if so when?

*Advances in Modern Mental Chronometry* José M Medina, Willy Wong, José A Díaz, Hans Colonius, 2015-05-19. Mental chronometry encompasses all aspects of time processing in the nervous system and constitutes a standard tool in many disciplines including theoretical and experimental psychology and human neuroscience. Mental chronometry has represented a fundamental approach to elucidate the time course of many cognitive phenomena and their underlying neural circuits over more than a century. Nowadays mental chronometry continues evolving and expanding our knowledge and our understanding of the temporal organization of the brain in combination with different neuroscience techniques and advanced methods in mathematical analysis. In research on mental chronometry human reaction responses times play a central role. Together with reaction times other topics in mental chronometry include vocal manual and saccadic latencies subjective time psychological time interval timing time perception internal clock time production time representation time discrimination time illusion temporal summation temporal integration temporal judgment redundant signals effect perceptual decision and motor time etc. The aim of this research topic is to provide an overview of the state of the art in this field its relevance recent findings current challenges perspectives and future directions. Thus as a result a collection of 14 original research and opinion papers from different experts have been gathered together in a single volume. We hope this research topic will provide a useful framework and an up to date set of papers for further discussion on mental chronometry within the human brain. We are grateful to all the referees for their valuable support effort and time during the creation of the research topic. Granada April 2015. Jos M Medina Willy Wong Jos A D az Hans Colonius
