Osif, 2011-08-09 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links on a topic engineers need the best information information that is evaluated up to date and complete Accurate vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans While the award winning first edition of Using the Engineering Literature used a roadmap analogy we now need a three dimensional analysis reflecting the complex and dynamic nature of research in the information age Using the Engineering Literature Second Edition provides a guide to the wide range of resources available in all fields of engineering This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering The information age has greatly impacted the way engineers find information Engineers have an effect directly and indirectly on almost all aspects of our lives and it is vital that they find the right information at the right time to create better products and processes Comprehensive and up to date with expert chapter authors this book fills a gap in the

Science, Technology, and Innovation** Sven Hemlin,Carl Martin Allwood,Ben Martin,Michael D. Mumford,2014-03-14
Leadership is vital to creativity and successful innovation in groups and organizations leadership is however seldom studied
in the academic literature as a creativity driver One reason for the lack of attention paid to leadership s effect on creativity
may be the common belief that creativity cannot and should not be managed Creative individuals and groups are regarded as
and indeed often are autonomous and self driving From this belief the erroneous conclusion is drawn that there is no need
for leadership in creative environments and situations The better conclusion proposed by this book is that leadership not only
stimulates creativity but that such a leadership in the science technology and innovation fields should specifically possess at
least two features a expertise in the field s and b an ability to create support and encourage individuals groups and creative
knowledge environments A number of specialist authors in this volume offer original theoretical empirical and applied
chapters that elucidate how to better organize and lead creative efforts in science technology and innovation A number of
important research questions are raised and answered including What kinds of leaderships are needed at different levels of S
T organizations for a creative output What social and cognitive abilities and skills are needed for leadership in creative
environments How does leadership vary with different phases of the creative process This book offers concrete analysis of
how leaders and managers can facilitate promote and organize for creative performance in science technology and in
innovating organizations making it required reading for academic and industrial research leaders scientists and engineers
