Iterative Algorithms For Short Term Forecasting:

Iterative Algorithms for Short-term Forecasting Nina Kondrashova, 2014-11-28 The monograph examines the relaxation iterative algorithms for short term forecasting of real processes Their main structural features and the convergence are presented These algorithms can work as with the small sample sizes ranging from three records so with the large amount of data from three dozen up to thousand variables and up to five dozen of thousand records Since in these algorithms is observed balance between speed and complexity of models which they build there are suggested ways to increase the accuracy of solutions if volume of observations is small For example to accelerate drag selection for patients there are used different sample divisions adaptive prognosis and complex forecasting that takes into account low frequency trend and high frequency component residue of the real process But one step forward forecast of space weather with a lot of records has shown the high accuracy on the examination sample without mentioned accuracy improvement tools Comparison of oil price forecasts obtained via GMDH against well known methods showed greater accuracy for the first ones This book is intended for specialists in the field of forecasting complex systems

Urban Transport and Hybrid Vehicles Seref Soylu, 2010-08-18 This book is the result of valuable contributions from many researchers who work on both technical and nontechnical sides of the field to be remedy for typical road transport problems Many research results are merged together to make this book a guide for industry academia and policy makers
