Gunther, 2007-01-17 In these days of shortened fiscal horizons and contracted time to market schedules traditional approaches to capacity planning are often seen by management as tending to inflate their production schedules Rather than giving up in the face of this kind of relentless pressure to get things done faster Guerrilla Capacity Planning facilitates rapid forecasting of capacity requirements based on the opportunistic use of whatever performance data and tools are available in such a way that management insight is expanded but their schedules are not A key Guerrilla concept is tactical planning whereby short range planning questions and projects are brought up in team meetings such that management is compelled to know the answer and therefore buys into capacity planning without recognizing it as such Once you have your foot in the door capacity planning methods can be refined in an iterative cycle of improvement called The Wheel of Capacity Planning Another unique Guerrilla tool is Virtual Load Testing based on Dr Gunther's Universal Law of Computational Scaling which provides a highly cost effective method for assessing application scalability
