Advancements Adarsh Kumar, Sukhpal Singh Gill, Ajith Abraham, 2022-07-21 This book states that blockchain technology provides a secure distributed peer to peer and decentralized network with advanced cryptography primitives and protocols. The important question that arises in the quantum computing world is to test the existing blockchain networks against quantum attacks and design quantum computing enabled secure blockchain solutions. This book encourages professionals from different fields to provide blockchain and quantum technology integrated solutions that incorporate low cost effective QoS fast secure and futuristic demands. This book has surveyed and proposed approaches that improve quantum computing and cryptography protocols. Quantum computing and quantum science are not just helpful in software but the hardware world as well. To design networks with quantum science quantum enabled devices like quantum memories and quantum repeaters can be useful to demonstrate for organizations. For example designing a single quantum repeater for long distance quantum communication is useful in reducing the network cost and ensuring better security levels. This book has introduced the quantum computing and blockchain technology aspects their integration approaches and future directions.

Architecture of Computing Systems - ARCS 2011 Mladen Berekovic, William Fornaciari, Uwe Brinkschulte, Cristina Silvano, 2011-02-11 This book constitutes the refereed proceedings of the 24th International Conference on Architecture of Computing Systems ARCS 2011 held in Lake Como Italy in February 2011. Stepwise Refinement of Distributed Systems Jaco W. de Bakker, Willem-Paul de Roever, Grzegorz Rozenberg, 1990-04-25 The stepwise refinement method postulates a system construction route that starts with a high level specification goes through a number of provably correct development steps and ends with an executable program. The contributions to this volume survey the state of the art in this extremely active research area. The world's leading specialists in concurrent program specification verification and the theory of their refinement present latest research.

results and surveys of the fields State based algebraic temporal logic oriented and category theory oriented approaches are presented Special attention is paid to the relationship between compositionality and refinement for distributed programs Surveys are given of results on refinement in partial order based approaches to concurrency A unified treatment is given of the assumption commitment paradigm in compositional concurrent program specification and verification and the extension of these to liveness properties Latest results are presented on specifying and proving concurrent data bases correct and deriving network protocols from their specifications
