Chapter 1 (Introduction)

Exercise 1.1

Since $f(\cdot)$ is convex we have that

$$f(\lambda x + (1 - \lambda)y) \leq \lambda f(x) + (1 - \lambda)f(y). \quad (1)$$

Since $f(\cdot)$ is concave we also have that

$$f(\lambda x + (1 - \lambda)y) \geq \lambda f(x) + (1 - \lambda)f(y). \quad (2)$$

Combining these two expressions we have that f must satisfy each with equality or

$$f(\lambda x + (1 - \lambda)y) = \lambda f(x) + (1 - \lambda)f(y). \quad (3)$$

This implies that f must be linear and the expression given in the book holds.

Introduction To Linear Optimization Solution:

Public Systems Modeling Daniel P. Loucks, 2022-06-16 This is an open access book discusses readers to various methods of modeling plans and policies that address public sector issues and problems Written for public policy and social sciences students at the upper undergraduate and graduate level as well as public sector decision makers it demonstrates and compares the development and use of various deterministic and probabilistic optimization and simulation modeling methods for analyzing planning and management issues These modeling tools offer a means of identifying and evaluating alternative plans and policies based on their physical economic environmental and social impacts Learning how to develop and use the mathematical modeling tools introduced in this book will give students useful skills when in positions of having to make informed public policy recommendations or decisions *Minimum-support Solutions for Radiotherapy Planning* Stephen

Knowledge-Based and Intelligent Information and Engineering Systems Juan D. Velásquez, Sebastián A. Ríos, 2009-10-01 On behalf of KES International and the KES 2009 Organising Committee we are very pleased to present these volumes the proceedings of the 13th International Conference on Knowledge Based Intelligent Information and Engineering Systems held at the Faculty of Physical Sciences and Mathematics University of Chile in Santiago de Chile This year the broad focus of the KES annual conference was on intelligent applications emergent intelligent technologies and generic topics relating to the theory methods tools and techniques of intelligent systems This covers a wide range of interests attracting many high quality papers which were subjected to a very rigorous review process Thus these volumes contain the best papers carefully selected from an impressively large number of submissions on an interesting range of intelligent systems topics For the first time in over a decade of KES events the annual conference came to South America to Chile For many delegates this represented the antipode of their own countries We recognise the tremendous effort it took for everyone to travel to Chile and we hope this e

ort was rewarded Delegates were presented with the opportunity of sharing their knowledge of high tech topics on theory and application of intelligent systems and establishing human networks for future work in similar research areas creating new synergies and perhaps even new innovative fields of study The fact that this occurred in an interesting and beautiful area of the world was an added bonus *Mathematics and Computing: with FORTRAN Programming* William S. Semi-Infinite Programming Rembert Reemtsen, Jan-J. Rückmann, 1998-04-30 Semi infinite programming briefly SIP is an exciting part of mathematical programming SIP problems include finitely many variables and in contrast to finite optimization problems infinitely many inequality constraints Problems of this type naturally arise in approximation theory optimal control and at numerous engineering applications where the model contains at least one inequality constraint for each value of a parameter and the parameter representing time space frequency etc varies in a given domain The treatment of such problems requires particular theoretical and numerical techniques The theory in SIP as well as the number of numerical SIP methods and applications have expanded very fast during the last years Therefore the main goal of this monograph is to provide a collection of tutorial and survey type articles which represent a substantial part of the contemporary body of knowledge in SIP We are glad that leading researchers have contributed to this volume and that their articles are covering a wide range of important topics in this subject It is our hope that both experienced students and scientists will be well advised to consult this volume We got the idea for this volume when we were organizing the semi infinite programming workshop which was held in Cottbus Germany in September 1996
