Deletion, Insertion & Substitution

There are several types of mutations:

✓ **DELETION** (a base is lost/deleted)

✓ **INSERTION** (an extra base is added/inserted)

--- Deletion & insertion may cause what's called a **FRAMESHIFT** mutation, meaning the **reading "frame"** changes, thus changing the amino acid sequence from this point forward

✓ **SUBSTITUTION** (one base is substituted for another)

--- If a substitution **changes** the amino acid, it's called a **MISSENSE** mutation

--- If a substitution **does not change** the amino acid, it's called a **SILENT** mutation

--- If a substitution **changes the amino acid to a "stop,"** it's called a **NONSENSE** mutation

Complete the boxes below. Classify each as **Deletion, Insertion or Substitution AND** as either **frameshift, missense, silent or nonsense** (**Hint:** Deletion & Insertion will always be frameshift).
