The National Incinerator Testing and Evaluation Program Canada. Environmental Protection Service. Urban Activities Division,1985 The Parkdale P E I energy from waste plant consists of threetwo stage controlled air combustion incinerators with flue gasheat recovery The field tests were divided into two parts characterization to develop an understanding of the

incinerator operation and performance to examine the effects of various operating conditions on emissions from the incinerator. Parameters examined during characterization testing were primary and secondary chamber temperatures, ram cycles, and refuse loading rate and frequency. The main process variable adjusted during the performance tests was secondary chamber temperature. Emissions of concern were organics including dioxins, furans, acid gases, particulates, and metals.
