

Frog Dissection Pre-lab

Why dissect a frog?

Frogs and humans are vertebrates with similar organ systems. Although all of the internal organs are not the same in frogs and humans, it is helpful to learn about anatomy through dissections. We will be looking at each body system, and exploring individual organs of the frog. We will make comparisons of the frog's anatomy to our own.

The frogs that we will use in our lab were bred for the scientific purpose of learning anatomy. The companies that provide frogs make sure that the frogs are not an endangered species. The supply companies also use safe solutions to preserve the specimens. We will need to use gloves and wash our hands while working with preserved specimens.

Computer simulated dissections will be used in this lab by individuals who choose not to participate in the actual dissections.

The frogs gave their lives so that we can learn more about them and more about ourselves. In order to best use this opportunity to learn and show respect for the frog, we must follow all directions that are given to us and follow all safety procedures.

Digestive System: similar to humans

- adult frogs are carnivores
- frog has a large mouth with a tongue (attached at the front) used to capture insects
- has two sets of teeth (two on top, two below)
- swallowing of prey aided by its eyes (pressure pushes insects down to stomach)
- order of digestive system:
 - 1) mouth, (2) pharynx, (3) esophagus, (4) stomach, (5) small intestine, (6) large intestine, (7) cloaca (anus)
- frogs have a liver and pancreas too

Circulatory System:

- frogs are amphibians (thus, they are cold blooded)
- frogs have arteries, veins, capillaries, heart, and blood
- frog heart has 3 chambers: 2 atriums, 1 ventricle (human heart has 4 chambers: 2 of each)
- this causes there to be some mixing of oxygenated and de-oxygenated blood

Respiratory System:

- frogs exchange O₂ and CO₂ in their lungs, just like humans do
- frogs have 2 lungs for gas exchange, and nostrils for breathing
- O₂ can also diffuse directly through the frog's skin, that is why their skin is moist

Dissection Safety Rules

1. Conduct yourself in a responsible and safe manner at all times during the dissection.
2. Wear safety glasses while you are dissecting even if you wear glasses or contact lenses. Contact lenses can hold chemicals in the eye(s) increasing the potential damage in the event of an accidental splashing of chemicals into the eye(s).
3. The frog has been preserved with a safe chemical and the classroom windows will be cracked open to allow fresh air in the room. However, if you need to take a break or the odor is beginning to bother you, notify the teacher.
4. Avoid contact with preservative chemicals. Keep your hands covered with the plastic gloves at all times. Rinse the frog completely before dissection.
5. Use the proper procedures described in the manual to pin the frog to the dissecting pan. Do not dissect the frog while holding it.
6. Handle the scalpel with extreme care. It is sharp enough to cut through skin.

Frog Dissection Pre Lab Answer Key
