

CIE A-Level Chemistry (9701) Paper 3 Notes

The Chemistry Paper 3 is 2 hours long. First check if you have 2 or 3 questions in your question paper. If 2, dedicate 1 hour for each question, if 3, you have about 40 minutes for each question.

Titration (Practical):

- First make sure you read the question carefully and read the instructions well – you do not want to switch around chemicals or skip a step by mistake, then you have to do the full thing again.
- Make sure to rinse your burette and pipette with the chemicals that should go into them.
- After rinsing your burette, fill it up to a tad above the 0.00 mark and then open the tap over the sink to dislodge any air bubbles. After you make sure there are no air bubbles, top up the burette to 0.00 or a tad less if needed.
- Make sure to remove the funnel as soon as you finish filling the burette, then take your initial volume.
- The precision of a burette is $\pm 0.05\text{cm}^3$ and the precision of a pipette is to one decimal place (25.0cm^3). Your burette readings in the table should reflect the 0.05 precision of the burette, by always ending in either .00 or .05
- Be familiar with the indicator colours:

- When you feel you are getting close to the endpoint, tighten your burette knob in order to control the drops well. Stir the conical flask well and continuously with your stronger hand, and use your weaker hand to operate the knob.
- If you think you have reached the end-point but you are not sure, note down the value you have on your burette, and then continue a bit further to see if the colour is more within the shade of the endpoint or acid/base (after you continue you should be able to distinguish clearly between the two).
