Emerging Therapies in Neurorehabilitation José L. Pons, Diego Torricelli, 2013-08-13 This book reports on the latest technological and clinical advances in the field of neurorehabilitation. It is however much more than a conventional survey of the state of the art in neurorehabilitation technologies and therapies. It was formed on the basis of a week of lively discussions between curious PhD students and leading research experts during the summer school on neurorehabilitation, SSNR2012, September 16-21 in Nuvalos, Zaragoza, Spain. Its unconventional format makes it a perfect guide for all PhD students, researchers, and professionals interested in gaining a multidisciplinary perspective on current and future neurorehabilitation scenarios. The book covers various aspects of neurorehabilitation research and practice, organized into different parts. The first part discusses a selection of common impairments affecting brain function, such as stroke, cerebral palsy, and Parkinson's disease. The second deals with both spinal cord and brain plasticity. The third part covers the most recent rehabilitation and diagnostics technologies, including robotics, neuroprostheses, brain-machine interfaces, and electromyography systems. Practical examples and case studies related to the application of some of the latest techniques in realistic clinical scenarios are covered in the fourth part. **The Cambridge Handbook of Consumer Privacy** Evan Selinger, Jules Polonetsky, Omer Tene, 2018-04-02 Businesses are rushing to collect personal data to fuel surging demand. Data enthusiasts claim personal information that is obtained from the commercial internet, including mobile platforms, social networks, cloud computing, and connected devices, will unlock path-breaking innovation, including advanced data security. By contrast, regulators and activists contend that corporate data practices too often disempower consumers by creating privacy harms and related problems. As the Internet of Things matures and facial recognition, predictive analytics, big data, and wearable tracking grow in power, scale, and scope, a controversial ecosystem will exacerbate the acrimony over commercial data capture and analysis. The only productive way forward is to get a grip on the key problems right now and change the conversation. That is exactly what Jules Polonetsky, Omer Tene, and Evan Selinger do. They bring together diverse views from leading academics, business leaders, and policymakers to discuss the opportunities and challenges of the new data economy.

Discorrelated Images Shane Denson, 2020-09-18 In Discorrelated Images Shane Denson examines how computer generated digital images displace and transform the traditional spatial and temporal relationships that viewers had with conventional analog forms of cinema Denson analyzes works ranging from the Transformers series and Blade Runner 2049 to videogames and multimedia installations to show how what he calls discorrelated images images that do not correlate with the abilities and limits of human perception produce new subjectivities affects and potentials for perception and action Denson s theorization suggests that new media theory and its focus on technological development must now be inseparable from film and cinema theory There s more at stake in understanding discorrelated images Denson contends than just a reshaping of cinema the development of new technical imaging processes and the evolution of film and media studies discorrelated images herald a transformation of subjectivity itself and are essential to our ability to comprehend nonhuman agency
