In addition, many enterprises are starting to build critical business functions on Linux servers to take advantage of the openness and portability of those applications across both on-premises and cloud-based infrastructures. These combined requirements lead to the need for a solution that allows enterprises to support highly available Linux environments for critical business applications. We describe basic concepts required for planning and designing an infrastructure to meet the requirements for high availability and business continuity, and we compare and contrast different options and tools. While the publication is mostly targeted at skilled professionals who are designing and installing highly available Linux environments, it starts with a basic understanding of the technology to help less technical readers understand the concepts.
