Information Systems Perspectives from Small Organizations Özgün Imre, 2017-12-08 Why do organizations adopt information systems Is it just because of financial reasons of concerns for efficiency Or is it due to external pressures such as competitor pressure that an organization adopts an information system And how does the adoption take place Is it a linear process or is the process one of conflicts Does a specific person govern this process or do we have multiple parties involved What happens if these conflicts occur among those involved How does the organization move on and achieve a successful information system adoption By investigating two organizations one international academic journal and one South American manufacturing company this thesis aims to investigate the whys and hows of information system adoption and aims to contribute to the discourse on information system adoptions in small organizations an often underrepresented segment in information system adoption literature By adopting different theoretical lenses throughout the five research papers included this body of work suggests that even when seemingly simple information system adoptions can become rather complex The cases reveal that the role of information systems and issues related to information system adoptions are often not well thought out in the early days of the organization The actors understandings of adoption and consequences mature and the information systems become more intertwined Common use of stakeholder theory introduces general stakeholders and their interaction with the focal organization The cases reveal that the adoption process involves multiple actors even within what would initially appear as a stakeholder and that those actors can be in conflict with each other These conflicts often lead to negotiations and the cases reveal that these negotiations are opportunities of learning the actors engage with the information system and with each other gaining new knowledge about the issues at hand The dissertation argues that there are various social worlds in information system adoptions and various factors ranging from organizational structure to social norms that often affect why and how the organization undergoes an adoption process The multiple power relations and divergent interests of stakeholders in these adoption processes and how information systems affect other parts of the organization reinforce the need for a well thought out flexible and reflexive approach to information system adoptions *Advances in Computing* Andrés Solano, Hugo Ordoñez, 2017-08-14 This book constitutes the refereed proceedings of the 12th Colombian Conference on Computing CCC 2017 held in Cali Colombia in September 2017 The 56 revised full papers presented were carefully reviewed and selected from 186 submissions The papers are organized in topical sections on information and knowledge management software engineering and IT architectures educational informatics intelligent systems and robotics human computer interaction distributed systems and large scale architectures image processing computer vision and

Why ERP? A Primer on SAP Implementation F. Robert Jacobs, D. Clay Whybark, 2000-01-06 Why ERP is not a traditional textbook designed for a specified course it is patterned after the wildly successful short novel *The Goal* by Eli Goldratt *The Goal* is currently required reading in many undergraduate MBA and executive courses Like *The Goal* Why ERP is a short novel about a manager in a furniture manufacturing business who is charged with learning about and implementing a new ERP system particularly SAP R 3 The story tells of his experience learning about it his considering other installations as examples and then his deciding the key issues and how to proceed Incorporated into the story is a concise introduction to the basic concepts and architecture of ERP systems including actual screen shots of R 3 modules Though this is NOT a programming book it is a quick read overview and it can be assigned even for systems majors as a background reading to lay out the managerial issues and build a basic understanding of the concepts prior to doing actual technical programming or hands on R 3 projects Through the eyes of the hero in the novel the reader is presented with all the related implementation and business issues Intended to provide a non technical non programming introduction this book can stand alone as a quick read or self study introduction for any manager or business student The text is also great for schools who do NOT have any SAP Oracle PeopleSoft or other ERP system on campus and who have no access to online or hands on samples or examples This book can provide the needed literacy and awareness of what ERP is and why it matters
