reader's understanding of how astronomers, planetary scientists, biologists, and other scientists make progress at the cutting edge of this dynamic field. Enriched with a wealth of engaging features, this textbook brings any citizen of the cosmos up to speed with the scientific quest to discover whether we are alone or part of a universe full of life. An acclaimed text designed to inspire students of all backgrounds to explore foundational questions about life in the cosmos. Completely revised and updated to include the latest developments in the field, including recent exploratory space missions to Mars, frontier exoplanet science, research on the origin of life on Earth, and more. Enriched with helpful learning aids, including in-chapter "Think about It" questions, optional "Do the Math" and "Special Topic" boxes, "Movie Madness" boxes, end-of-chapter exercises and problems, quick quizzes, and much more. Supported by instructor's resources, including an illustration package and test bank available upon request.

**Biology** Robert D. Allen, 1995. This book presents the fundamental concepts of biology and develops students' critical thinking skills to apply these concepts. It introduces the procedures of hypothesis formation, prediction, experimental design, and interpretation as the essential parts of scientific investigation. It covers cell theory and focuses on energy as well as the catalytic action of enzymes and diffusion across cell membranes. It covers the major physiological systems in organisms. Primary emphasis is placed on the application of basic concepts such as diffusion, osmosis, energy capture and release, and the action of enzymes. This book includes molecular biology and population genetics, as well as cell division and Mendelian inheritance. It finally covers the mechanisms of selection and speciation, as well as the long-range implications of evolution.
